The mixer

The function of an agitator is to force a fluid, by mechanical means, to acquire a circulatory movement inside a container. The objectives of this agitation may be the mixture of two fluids, the dissolution of a solid in a liquid, improve the heat transfer ...

Configuration options

In Goldspray are manufacturers and make our agitators according to customer needs.

We can create endless variations on the standard stirrer:

- Motors from 1/8 HP to 2HP
- Removable propellers, diameter min. 40mm
- 12 mm diameter shaft with the required length
- Shaft and propeller made of stainless steel
- Pneumatic lift very precise and smooth
- Speed regulation according to flow
- Custom dimensions, possibility of electric motor ...

Technical data

Motor:	Neumático
Power:	0,3kW
Rpm:	900
Air consumption	max. 259 l/min
Protection:	IP 65
Propeller:	Dismountable, to choose
Elevation:	Pneumatic
Weight:	14 kg

Contact material

Shaft:	AISI 304 / AISI 316
Propeller:	To choose
Capacity:	adaptable
Ø container:	10- 20 cms

We design and manufacture our agitators according to customer needs.

Distributor

Manufacture in Spain according to EC regulations

SECTORS

- Painting, construction
- Pharmaceutical, cosmetics
- Chemical products
- Education, research
- Feeding

FUNCTIONS

- Shake
- Mix
- Disperse
- Homogenize, etc

MEASUREMENTS

- Width: 350 mm
- Height:
630 mm in its lower position
800 mm in its upper position
- Depth: 360mm

Propeller types

Turbine propeller
(stainless steel)

Marine propeller
(stainless steel)

Cowler propeller
(stainless steel)
